

Who can help?

Samuel Robson
samuelrobson@berkeley.edu

[HTTPS://SAMUELROBSON4.GITHUB.IO/](https://samuelrobson4.github.io/)

Have you ever found yourself
struggling to find a person with the
right expertise to help you?

I've spent over 6 years on
project teams at companies
like Accenture and TikTok...

I saw the same pattern

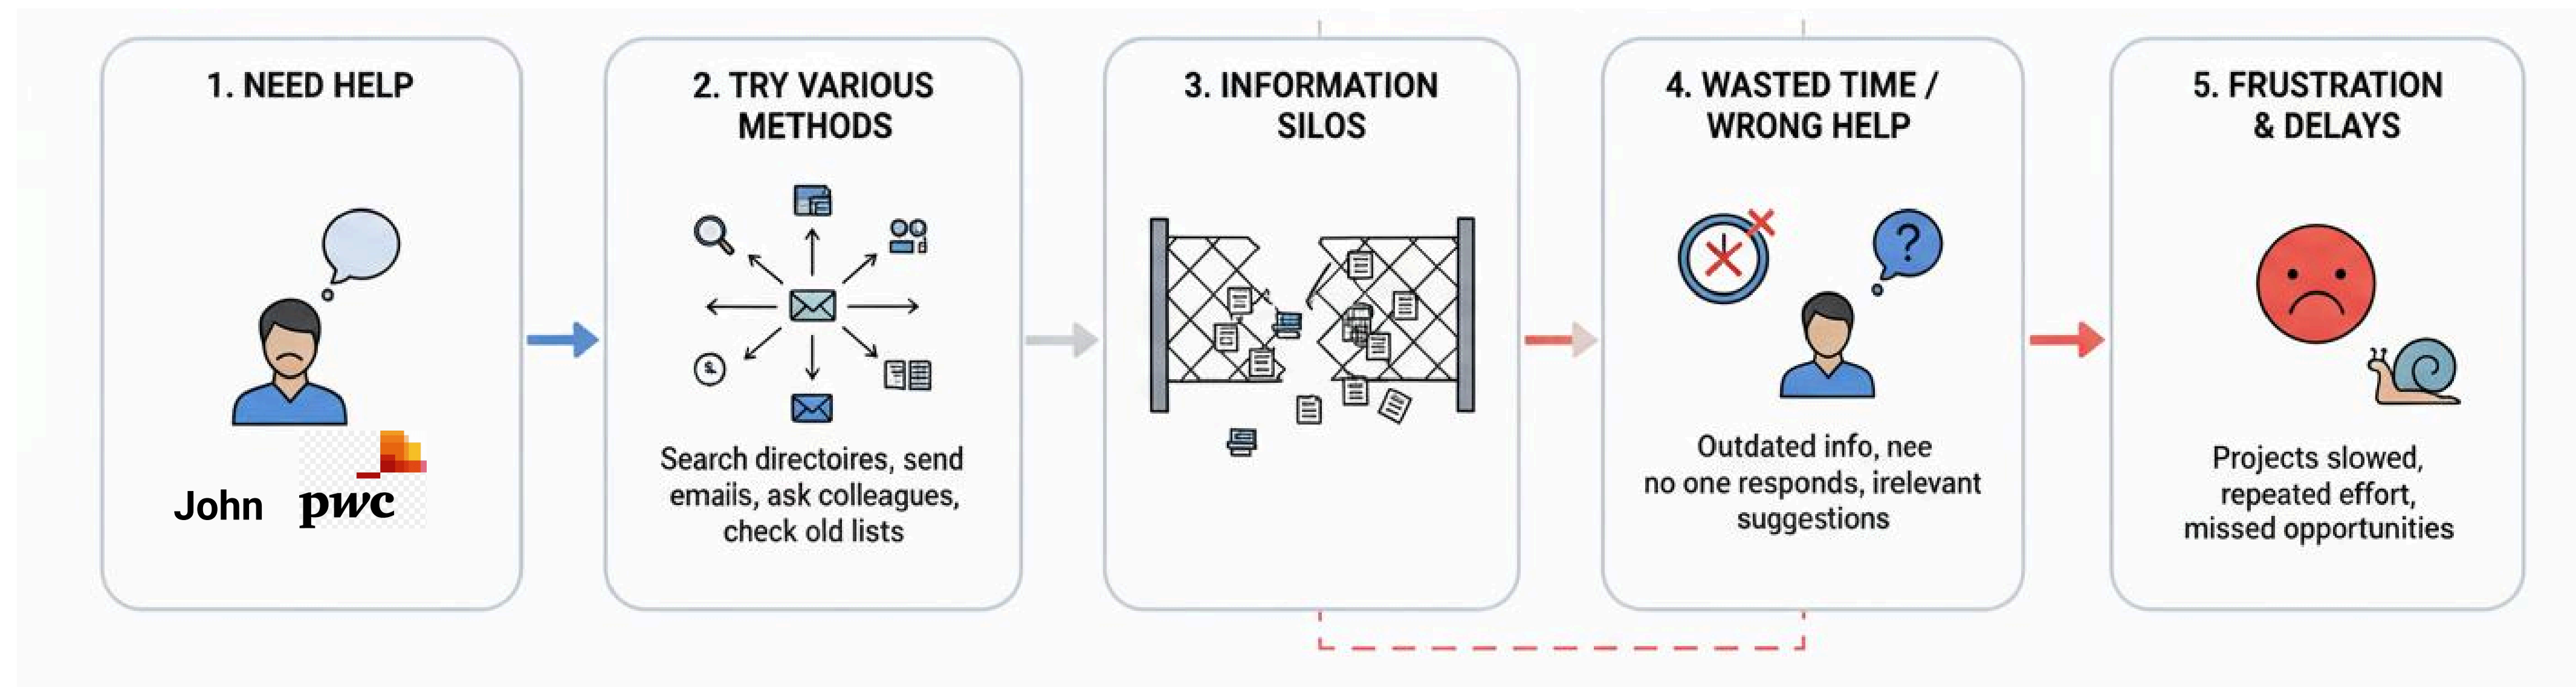

We spent too much time
searching for experts...

or

...we didn't search enough
and missed critical
knowledge

THE PROBLEM

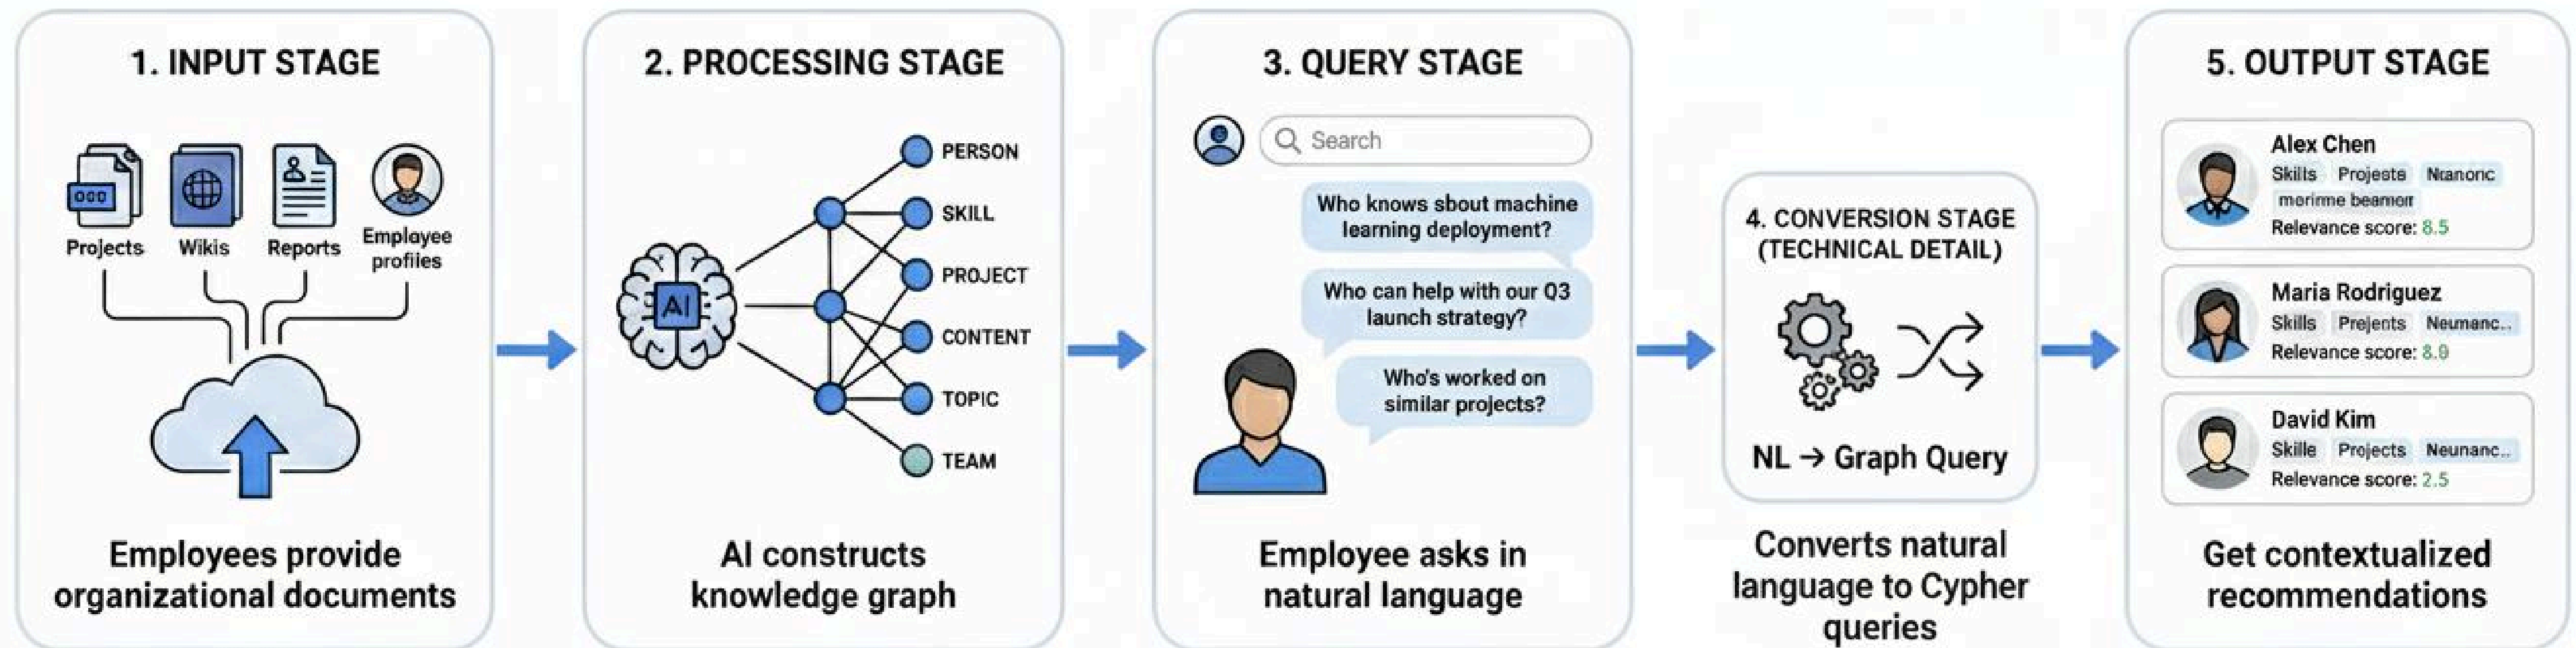

John works at PWC and can't find the right people to help on his projects

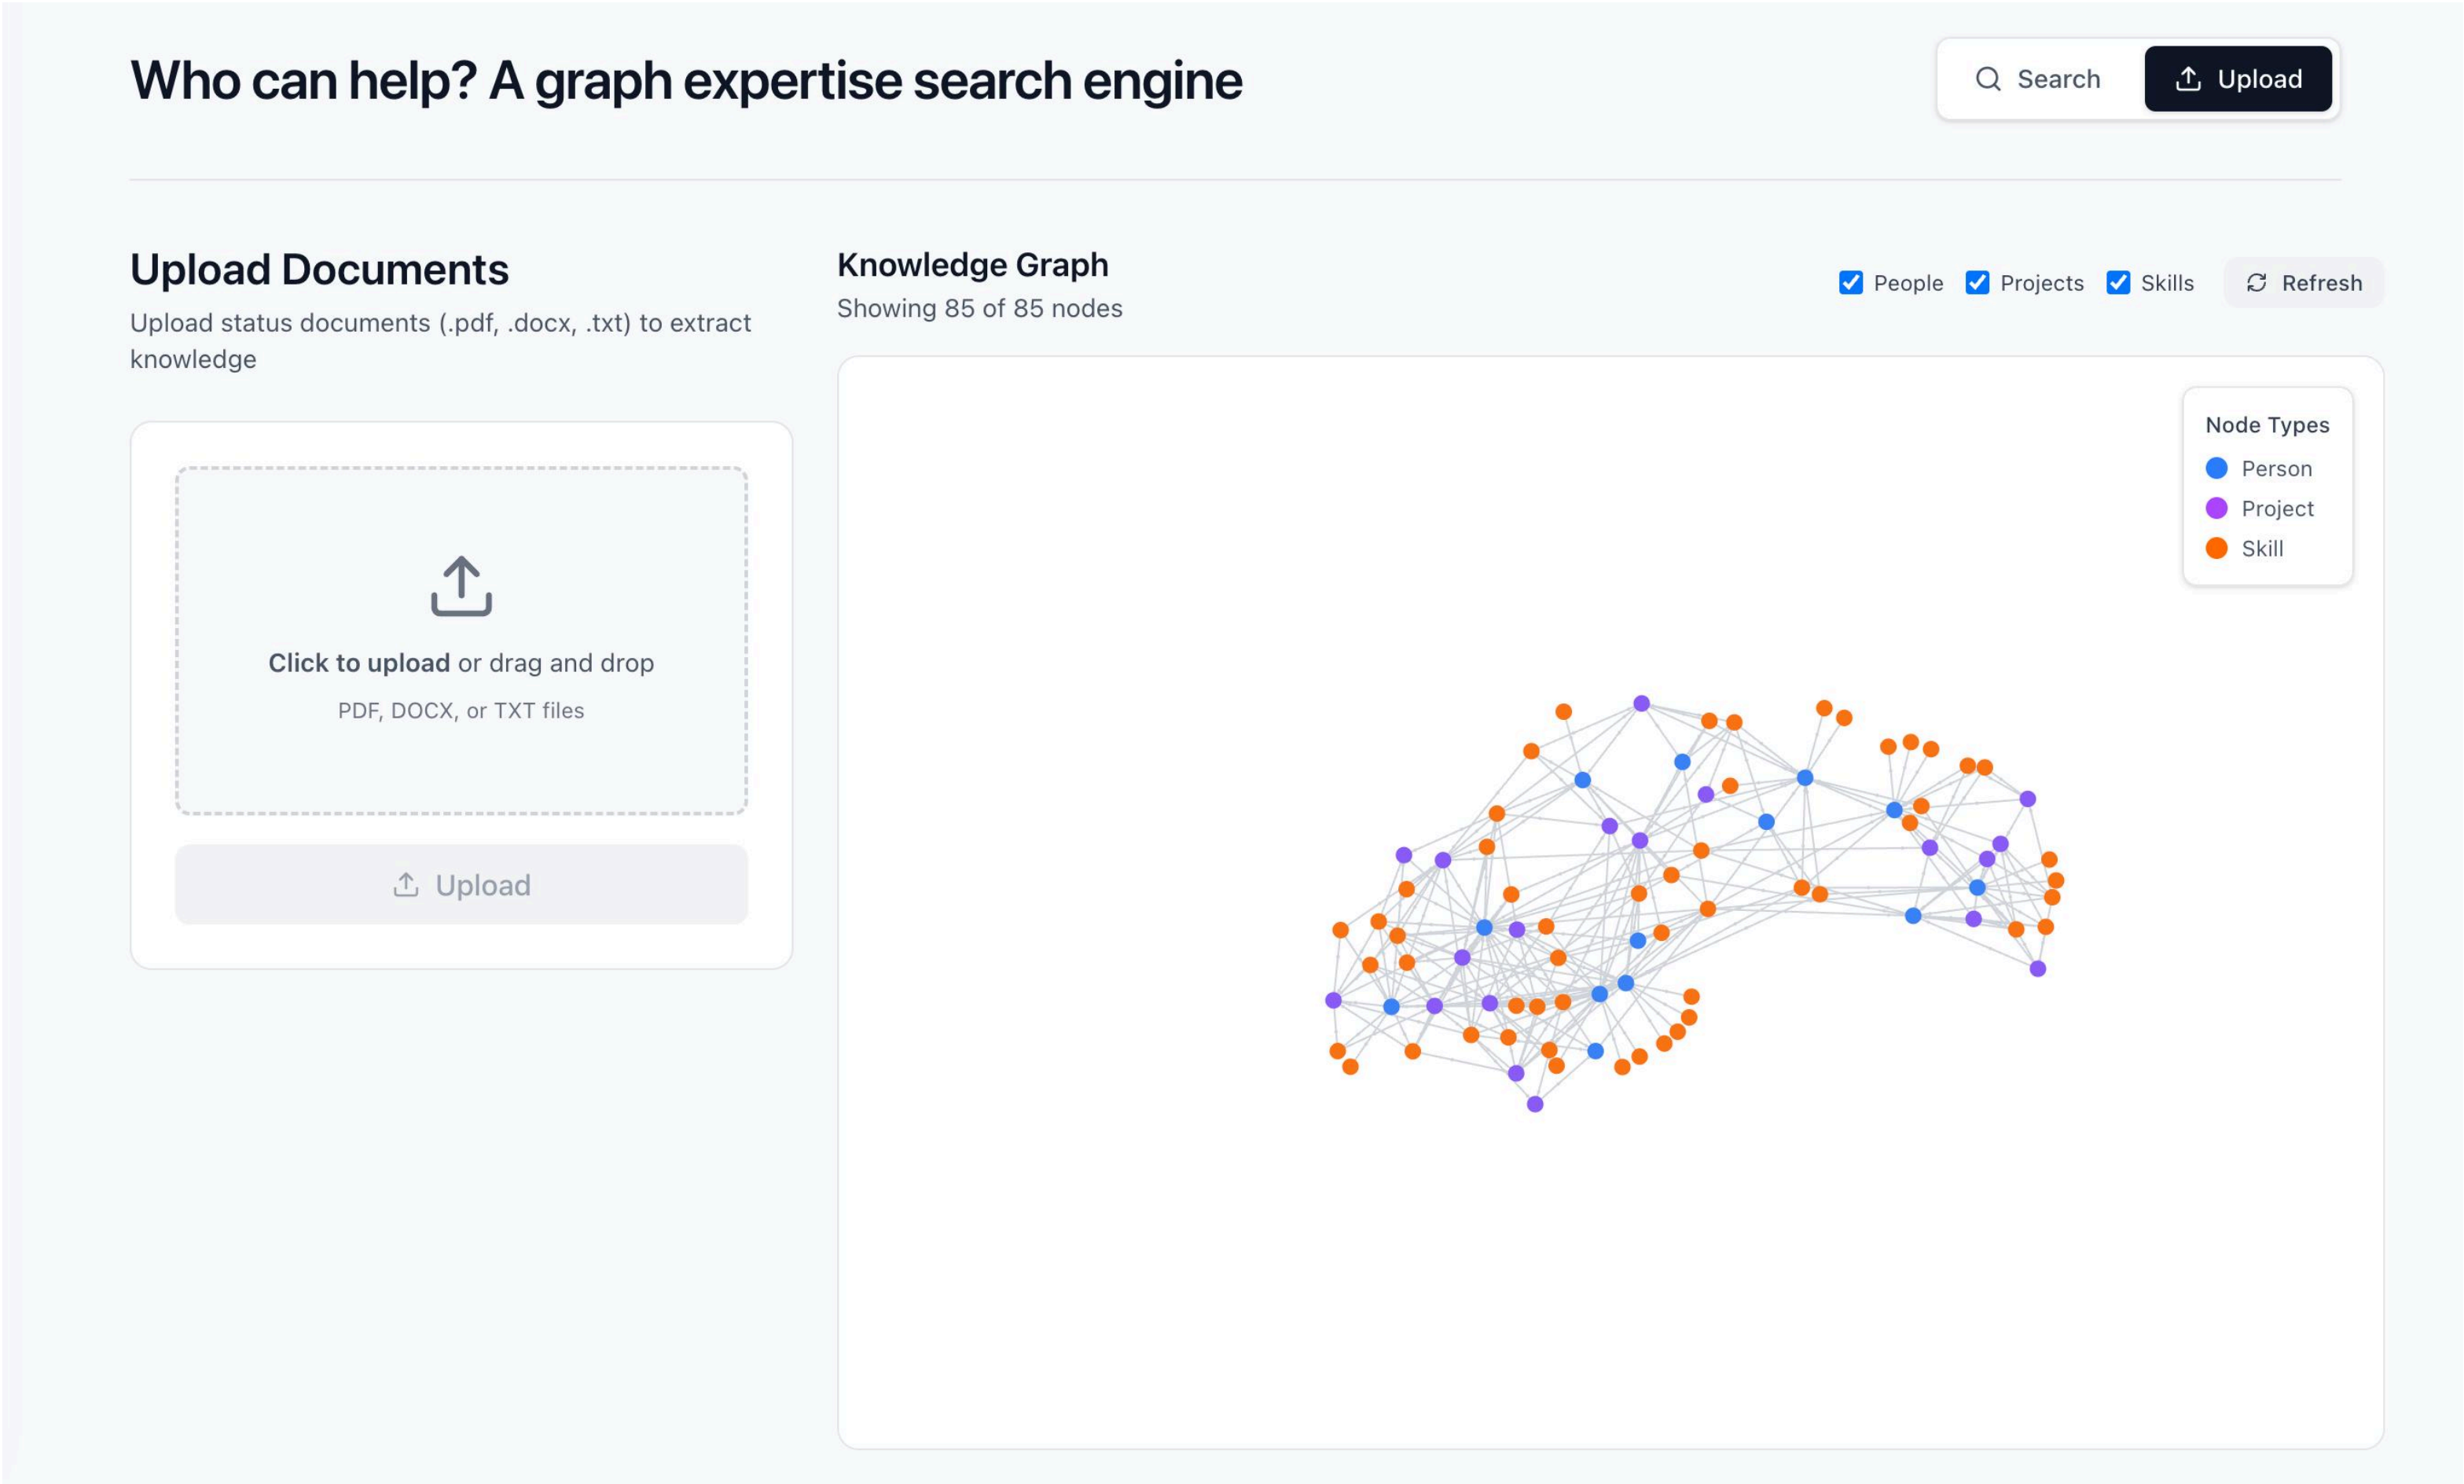

THE SOLUTION

Who Can Help? is a graph-based expert recommendation system that makes organizational knowledge instantly accessible

HOW IT WORKS

HOW IT WORKS

HOW IT WORKS

Who can help? A graph expertise search engine

Search

Upload

Search Knowledge Graph

Ask questions about people, skills, projects, and collaborations

Who knows Python?

Search

Try:

Find people with React

Who knows Python?

Projects using GraphQL

Who worked with Sarah Chen?

Show me backend developers

People with leadership skills

What did Marcus Rodriguez work on?

Projects using Python and Docker

2 Results

skill search

Finds all people who have Python or related Python libraries as a skill, returns their complete skill set, and ranks them by number of Python-related skills matched

Apache Kafka

data analysis

analytical skills

SQL

Tableau

Python

WHY NOW?

1. Natural language is the new interface

2. Enterprise software doesn't work for the small teams of today

3. Employee search expectations have shifted

WHY ME?

The Unfair Advantage

- I spent 6 years at Accenture & TikTok - I know the problem, the buyers, and have the network for first customers
- Legacy companies take 3 years to ship what a small team could build in 6 months

MARKET OPPORTUNITY

TAM

\$15B

- 200M knowledge workers in organizations with 100+ employees globally
- \$75 ARPU (comparable to enterprise collaboration tools)
- TAM = 200M × \$75 = \$15B

SAM

\$2B

- Professional Services: 10M employees (Accenture, McKinsey, etc.)
- Tech Companies: 8M employees
- High-Growth Startups: 2M employees
- Universities & Research: 5M faculty/research staff
- Total: 25M users × \$75 ARPU = \$2B

SOM

\$12M

- Year 1: 15 companies, 3,000 users → \$225K
- Year 2: 60 companies, 25,000 users → \$2M
- Year 3: 200 companies, 120,000 users → \$10-12M

THE ASK

\$200K Seed Round

-
1. Build production-ready platform
 2. Pilot with 3-5 initial customers (targeting professional services teams)
 3. Validate unit economics and prepare for Series A

Every company with >100 employees faces this problem.

We're building the infrastructure layer for organizational intelligence.

Let's make finding expertise as easy as asking a question

Thank you and let's connect: samuelrobson@berkeley.edu
